METALLOGRAPHY

AN INTERNATIONAL JOURNAL

Volume 2

LIBRARY USE ONLY

UNIVERSITY OF HAWAII
LIBRARY

T. L. MacKay and R. G. Ingersoll (Newport Beach, California)
Crystallographic Features of Tensile Fracture of Polycrystalline Beryllium . . . 137
M. H. Richman and W. D. Sproul (Providence, Rhode Island)
Field Ion Microscopy of Carbides of Tungsten Formed Externally and *in Situ* . 149
K. G. Stjernberg (Gothenberg, Sweden)
Determination of Volume Distribution by Lineal Analysis 161
D. A. Aboav (Chorleywood, Herts., England) and T. G. Langdon (Vancouver, British Columbia, Canada)
The Shape of Grains in a Polycrystal 171
F. M. Smith, S. J. Mayhan, and R. V. Olson (Richland, Washington)
The Metallographic Preparation of Some Plutonium-Uranium Fuel Materials . . 179
H. L. Krautwedel (Karlsruhe, Germany)
A Review of Remote Optical Metallography 191
Walter W. Fowkes, Thomas D. Wilhelm, and Wayne R. Kube (Grand Forks, North Dakota)
Sample Preparation and Electron Microprobe Examination of Lignite Ash Deposits 209
C. L. Chaney and K. F. Powell (San Diego, California)
A Rapid Densitometry Method for Determining Preferred Orientation of Pyrolytic Carbon 227
J. T. Houston and K. Farrell (Oak Ridge, Tennessee)
Recrystallization of Nickel-270 239

SHORT COMMUNICATIONS:

F. H. Cocks (Waltham, Massachusetts)
Grain Boundary Cleavage and the Stress Corrosion of High-Strength Aluminum Alloys 247
M. R. Krishnadev and I. Le May (Saskatoon, Canada)
The Effect of Prior Cold Work on Precipitation in a Copper-Bearing Steel: Some Metallographic Observations 253
C. G. Rhodes (Thousand Oaks, California)
Alpha-Phase Nucleation in Omega-Bearing Ti-15V 257
W. Gifkins (Arbington, Cambridge, England)
A Weld Preparation Technique for Optical Microscopy 263
R. F. Bunshah and H. E. Olson (Livermore, California)
Revealing the Grain Size of Fine-Grained Vapor-Deposited Titanium 265
P. J. Moroz, Jr., D. H. Polonis, and R. Taggart (Seattle, Washington)
Intrinsic-Extrinsic Fault Pairs in Copper-Germanium Alloy Solid Solutions . . 269
P. E. J. Flewitt (Sheffield, England)
A Deformation-Induced Metastable f.c.c. Phase in a Copper-39.8 % Zinc Alloy 277
G. Beghi and E. Cazzaniga (Ispra, Italy)
Skeleton Network of Alumina in Al-Al_2O_3 Alloys 283
T. W. Butler (Annapolis, Maryland)
An Investigation of Particle Size Analyses as Applied to WC-Co 289
Theresa V. Brassard (Watervliet, New York)
Preparing Nickel-Boron and other Composites for Optical-Metallographic Examinations 293
John F. Kisiel (Brackenridge, Pennsylvania)
A New Etchant for T304 Stainless Steels 297

LETTER:

ALAN J. MARKWORTH (Columbus, Ohio)
A Comment on Particle Size Distributions in Volume Diffusion-Controlled Ostwald Ripening 303
Books: A Selected List 305

NUMBER 4, DECEMBER 1969

C. S. WHITCROFT AND J. W. MARTIN (Oxford, England)
The Influence of Chromium Content on the Precipitation of γ' (Ordered Ni_3Ti) in Some Austenitic Steels 309
ROBERT C. RAU AND EUGENE J. AMARAL (Cincinnati, Ohio)
Electron Microscopy of Precious Opal 323
D. KUNSTELJ AND A. BONEFAČIĆ (Zagreb, Yugoslavia)
A Metallographic Study of Decomposition of a Supersaturated Aluminum—Rich Aluminum—Iron Solid Solution 329
K. KRANJC AND M. PAIĆ (Zagreb, Yugoslavia)
X-Ray Microradiography of Flakes of Aluminum—Iron Alloys Quenched Rapidly from the Melt 337
J. K. STANLEY AND A. J. PERROTTA (El Segundo, California)
Grain Growth in Austenitic Stainless Steels 349
FRITZ ALDINGER (Stuttgart, Germany)
Eine Methode zur Bestimmung von Phasengrenzen Unvarianter Gleichgewichte in Mehrstoffsystemen 363

SHORT COMMUNICATIONS:

W. WALLACE (Ottawa, Canada)
Computer Indexing of X-Ray Powder Diffraction Patterns from Multiphase Materials 375
T. C. BLAIR (Youngstown, Ohio)
Photogenic Microstructures Resulting from Oxidation of Iron Silicates during Sintering 379
P. J. MOROZ, JR., D. H. POLONIS, AND R. TAGGART (Seattle, Washington)
Observation of Linear Arrays of Stacking Fault Tetrahedra in Quenched and Aged Alpha Copper-Germanium Alloys 385
W. WIEBE (Ottawa, Canada)
A Note on Etch Tunnels in Polycrystalline Aluminum 391
J. A. HUGO AND V. A. PHILLIPS (Schenectady, New York)
Resolution of {110} Atomic Planes of Tungsten in the Electron Microscope . . . 395
P. A. MOREL (Ontario, Canada)
Preparation of Sintered UO_2 for Transmission Electron Microscopy 399
Books: A Selected List 403
AUTHOR INDEX 407
TITLE INDEX 409

Information for Authors

SUBMISSION: Manuscripts may be submitted to the Editor, F. L. Cochran, or to the Associate Editors, K. A. Johnson or J. H. Bender. Manuscripts may also be submitted directly to a member of the Editorial Advisory Board.

LANGUAGE: Manuscripts may be submitted in English, French, or German, but an English abstract is required for all papers. For technical reasons, English is the preferred language.

TYPES OF CONTRIBUTIONS: Original research work not already published; reviews of specialized topics within the scope of the Journal; Short Communications; Letters to the Editors. Suggestions for review articles will be welcomed. Prospective authors should obtain preliminary approval from the Editor before preparing such an article.

MANUSCRIPTS: Manuscripts are received with the understanding that their contents are unpublished and are not being submitted for publication elsewhere; that the author has obtained written permission from the original copyright owner to reproduce material that has already appeared in another publication; that pending or registered patent rights are not violated; and that the Publisher will have the right to register the copyright. An *original* and two copies should be submitted, in double-spaced typing on pages of uniform size with wide margins at the left and right. Each table should be typed on a separate page. Legends for illustrations should be typed in sequence on a separate page or pages. All tables and illustrations should bear a title or legend. Phase diagrams should be expressed in both *weight percent* and *atomic percent*.

An Abstract and a Summary are required for full-length papers; the Summary must not exceed 200 words. Short Communications do not require an Abstract and must not exceed 800 words (including any illustrative material). The *preferred* length for Letters to the Editors is a maximum of 500 words.

References should be numbered consecutively throughout the text and collected together in a reference list at the end of the paper. Footnotes should not include bibliographic material, and reference lists should not include material that could more appropriately appear as a footnote. Numerals for references should be given as superscripts in the text. The following form for references is required:

JOURNALS:

G. H. Bannister, R. C. Burnett, and J. R. Murray, *J. Nucl. Mater.*, *2* (1961) 51.

BOOKS:

L. S. Darken and R. W. Gurry, *Physical Chemistry of Metals*, McGraw-Hill, New York, 1955, p. 445.

Abbreviations of journal titles should conform to those adopted by *Chemical Abstracts List of Periodicals*, 1961 edition and supplements.

All manuscripts of multi-authorship must indicate the name and full postal address of the author to whom proofs should be sent.

No manuscripts will be returned after publication unless a request for return is made when the manuscript is originally submitted.

ILLUSTRATIONS: Line drawings should be in a form suitable for reproduction, drawn in India ink on drawing or tracing paper, with lettering, etc., in thin pencil.

Photographs and micrographs should be black and white glossy prints and as rich in contrast as possible. One original and two copies of all illustrations are required To prevent any errors in magnification after reproduction, the legend for all micrographs (optical or electron) must contain the numerical magnification (e. g., 50 ×, 500 ×, 50.000 ×) in addition to a magnification scale–line drawn on the face of the micrograph; scale–lines may be expressed in microns, inches, or millimeters.

PROOFS: Authors will receive galley proofs, which they are requested to correct and return within 5 days. No new material may be inserted in the text at the time of proofreading. A "note added in proof" will be accepted only if permission from the Editor has been obtained; this will bear the date of receipt.

The Publisher will do everything possible to ensure prompt publication. It will therefore be appreciated if manuscripts and illustrations conform from the outset to the style of the journal.

REPRINTS: Fifty reprints without covers will be supplied free of charge per contribution. Additional reprints may be ordered at prices shown on the reprint price scale which will be sent by the Publisher at the time of the dispatch of the galley proofs.

BOOK REVIEWS: Book reviews will not be included, but a selected annotated list of pertinent books will be published.

Specimens for METALLOGRAPHY

INTRODUCTORY PRACTICAL METALLOGRAPHY

A Basic Course of Microstructures

THE STRUCTURE & STRENGTH OF METALS

A Study of Microstructure and Properties

THE STANDARD SERIES

Set	1	Low Melting Point Alloys
Set	2	Cast Light Alloys
Set	3	Cast Copper Alloys
Set	4	Cast Steels
Set	5	Cast Irons
Set	6	Wrought Light Alloys
Set	7	Wrought Copper Alloys
Set	8	Wrought Steels
Set	9	Wrought Nickel Alloys
Set	10	Wrought Titanium Alloys
Set	11	Sintered Carbides

ANNOTATED METALLOGRAPHIC SPECIMENS are manufactured in Britain by METALLURGICAL SERVICES LABORATORIES LI

Exclusive distributor in U.S.A.
